

Project Proposal: File Reader MCP

Summary

Build an MCP server that lets an AI assistant read local files such as PDFs, CSVs, text files, and images.

Goals

- List files in a sandboxed directory
- Extract text from PDF and TXT files
- Parse CSV files into rows
- Return PNG images for visual inspection

Timeline

Week 1: Scaffold server and list_files tool

Week 2: Add readers for each file type

Week 3: Error handling and tests

Risks

- Large files may exceed context limits
- Scanned PDFs contain no text layer
